Erosion Control

Green wall Halifax

In Autumn of 2018 CDTS carried out the hydroseeding to a green wall in Halifax for DTMS Ltd. Due to its size it attracted a lot of local and media attention and we were featured hydroseeding it on regional news. The wall is made up of geotextile filled bags which we then hydroseed onto the face. The hydroseeding mix was specially formulated to help adhere the mulch to the face and ensure the grass seeds were bound to the surface. This picture was taken in spring 2019.
