CDTS
Hydroseeding
Revegetation
Erosion Control

Heaton reservoir Manchester

Heaton reservoir is a large drinking water reservoir which supplies water to greater Manchester. CDTS are able to offer a safe environmentally sensitive solution to re-establishing the vegetation after remedial works. CDTS use Groweb hydroseeding materials which 100 % organic and natural and as such pose no threat to contaminating the water supply. CDTS completed nearly 20,000 m² of hydroseeding in Autumn 2021.
