SPG326N/S

Located in Beverley, East Yorkshire, Longcroft School & 6th Form College provides local students a rich and varied range of educational opportunities in addition to their formal curriculum, including drama and music productions, sports and their Skills for Life programme. As part of the Priority School Building Programme 2 (PSBP2), Langley Design working alongside Henry Construction provided a visually stunning new link canopy and covered walkway uniting the schools existing buildings to the brand new block. The new block provides the school three additional floors of teaching space consisting of science labs & preparation rooms, a learning resource centre, teacher workroom and new student reception. The large Sheldon SPG326 canopy features a non-fragile polycarbonate roof, that provides cover and shade whilst offering a striking splash of colour to the scheme. The SPG326 is available in a range of materials, finishes and roofing colours suitable for a variety of project needs, and provided the school with additional space for the Sheldon Picnic Table set (SPT312/ SBN310) offering extra dining facilities for the students, with black recycled plastic slats these are a durable and long lasting solution requiring almost no maintenance that will still look great in the years to come.
