

St. Margaret Clitherow Catholic Primary School is a small school linked closely with the parish community, offering a supportive and caring environment to the pupils whilst supporting their learning and preparing them for the challenges of their future lives. The brand new two-storey building offered new teaching facilities, including a Food Technology classroom, prayer room & a multi-use hall. Langley Design worked alongside main contractor Kier Construction to provide a bin storage solution for the new school. Offering bespoke design capabilities, we were able to provide a solution based on our popular SBS300 Sheldon Bin Store. Utilising chunky timber posts in galvanised steel shoes, the finished product is clad in Class 4 Treated Redwood timber pales to both the sides and top, ensuring suitable ventilation within the unit whilst also visually disguising the wheelie bins from view at ground level and from above. Offering a robust and durable solution our bin stores, cycle shelters & canopies come with full wind and snow loadings so you can be sure the product will be suitable for the years to come. Our flexible approach allows our many street furniture products to be adapted to achieve any projects specific requirements, available in a variety of materials and finishes and manufactured within our Wiltshire based Production Facility, Langley can supply, delivery and install throughout the UK.
