

SCS315

Booths Park is a new two-storey building providing 70,676 sq. ft of office space to the outskirts of Knutsford, Cheshire. Completed by GMI Construction the new facility offers a spacious and communal working environment including a central amphitheatre. Langley Design were approached by GMI to offer up a solution for the site's cycle storage requirement that was both budget friendly and space efficient. Utilising our popular Sheldon SCS315 Cycle Shelter, we manufactured using structurally graded Treated Class 4 Redwood and Galvanised Steel leg columns, which provided a durable & long lasting whilst aesthetically pleasing final product to site. Finished with a R32 profiled metal roof, which is available in a variety of colours to compliment the projects colour scheme, and a single gate with our standard slider locking mechanism, this fully enclosed unit provides a safe and secure storage space for the office users cycles. Inside the Cycle Shelter we installed the Malford MCR206 Two Tier Cycle Rack. A space saving storage solution, this system allows bikes to be secured double stacked, reducing the overall footprint required for the Cycle Store. Langley Design offer a wide range of cycle storage solutions; from timber to steel finishes, single or double width units, enclosed and open sided and various roofing options from simple polycarbonate to sedum green roofs. Manufactured in the heart of the Cotswold and available for delivery and installation throughout the UK, we pride ourselves in our flexible and problems solving approach. If you have a requirement on a current or future project, please get in contact on 01793 759461.
