

National contractor Wates Construction has completed works at Nottingham College City Hub, a landmark new campus for the College providing space for 2,000 students and 200 staff, offering local people a state-of-the-art learning experience and future employment opportunities.

Langley Design were appointed by Wates to manufacture and install a small timber bike shelter to offer the students secured bike parking on the campus. Timber bike shelters are a great way to offer covered cycle parking whilst also offering much better environmental credentials when compared to the traditional steel units which appear around the UK. The Timber is PEFC certified and with all of Langley Design units having wind and snow loadings as standard, the customers are assured they are getting high quality, well designed and structurally sound units whilst also offering the end user a much more pleasing aesthetic.
