The Hydro Arena, Glasgow

STEREO-KINETIC® Wall cladding can be used as a decorative installation, both internally and externally.

Small quantities of tiles can be heat treated to create different shades of bronze.

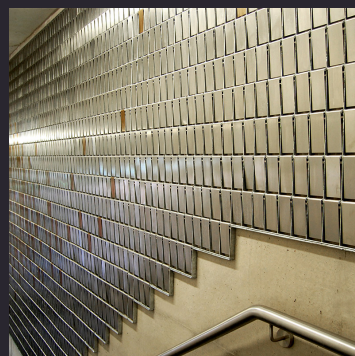

The SSE Hydro in Glasgow, designed by Foster + Partners, is the biggest performance arena in the UK. The dramatic structure takes the form of a skewed dome, with external walls clad in translucent air-filled ETFE cushions that can create a dazzling illuminated facade.

The project at the SSE Hydro was the first occasion when panes of SSTEREO-KINETIC® Wall were used for internal decoration. Each stainless steel tile is engraved with the name of an artist, commemorating their performance.

The result was a stunning and imaginative method of covering the drab concrete wall which greets the high-profile performers who appear at the arena.

- Interior Application
- Decorative Installation
