

Cast Polyurethane over a steel core in a range of traditional and contemporary designs. Polyurethane is an extremely hard, damage resistant polymer used in many industrial applications for its corrosion resistance and longevity.

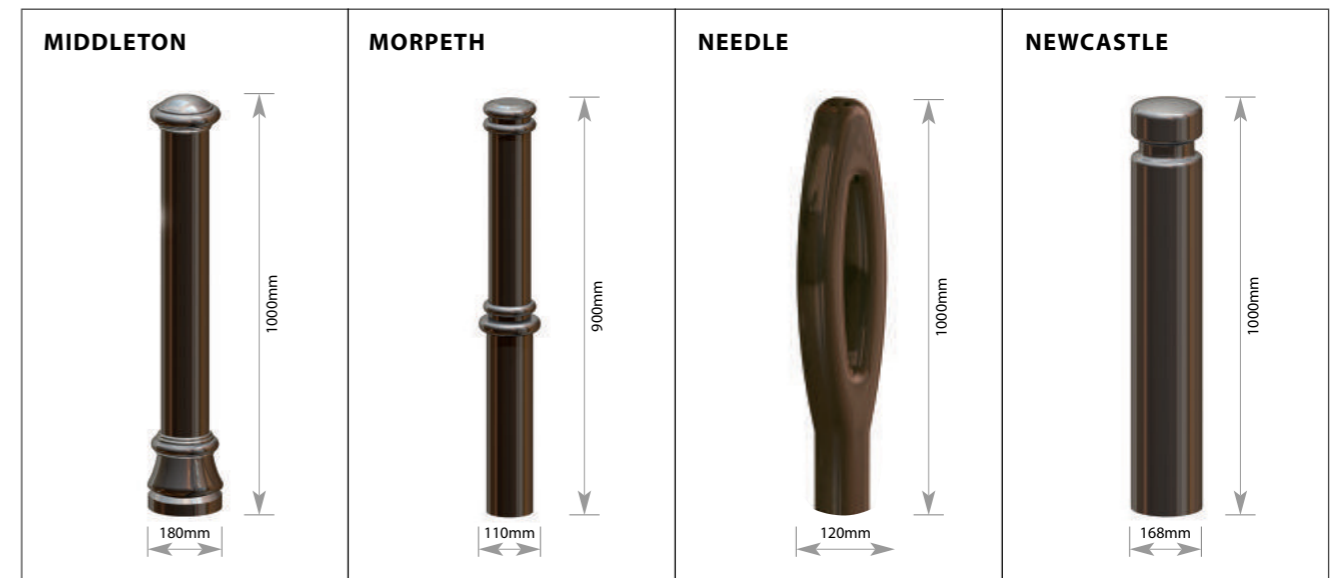

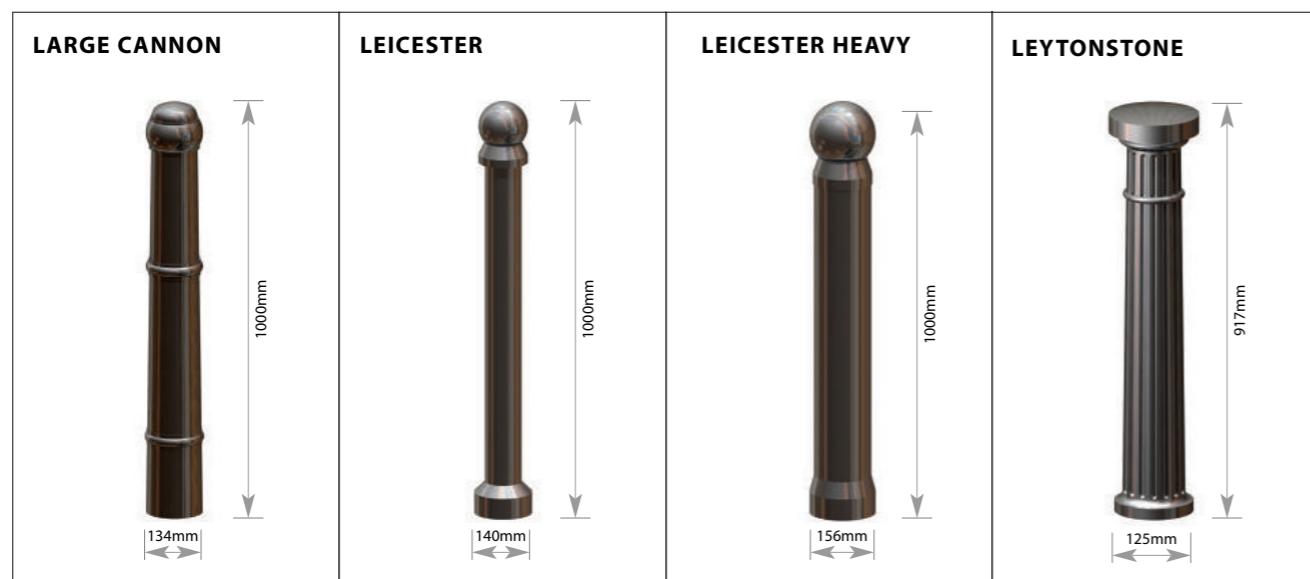

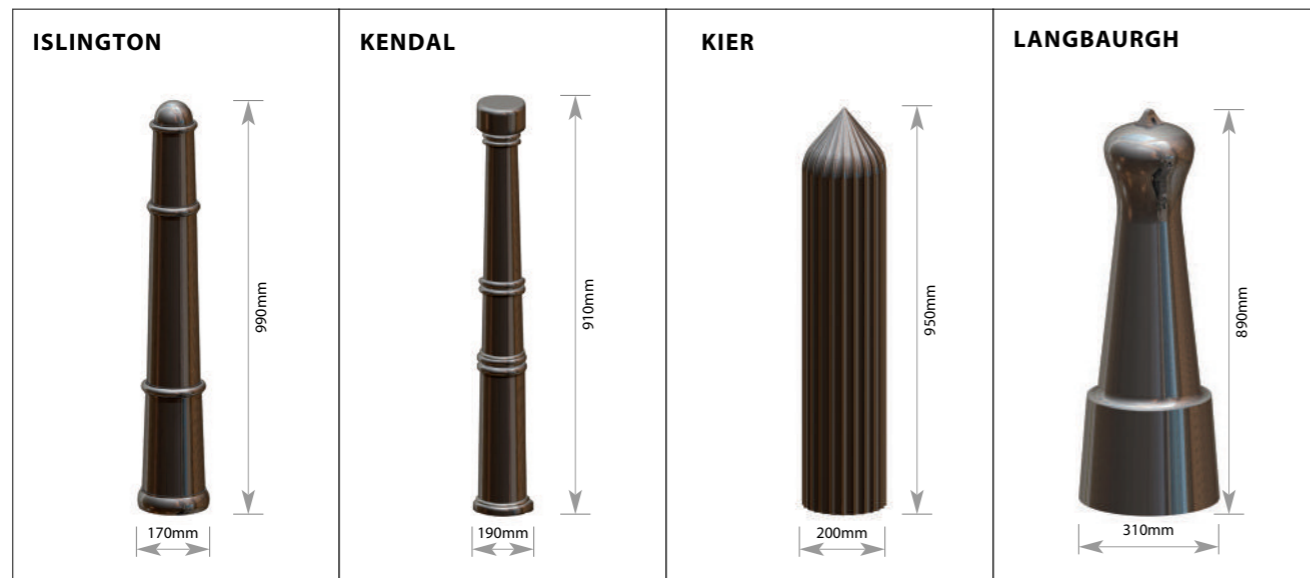

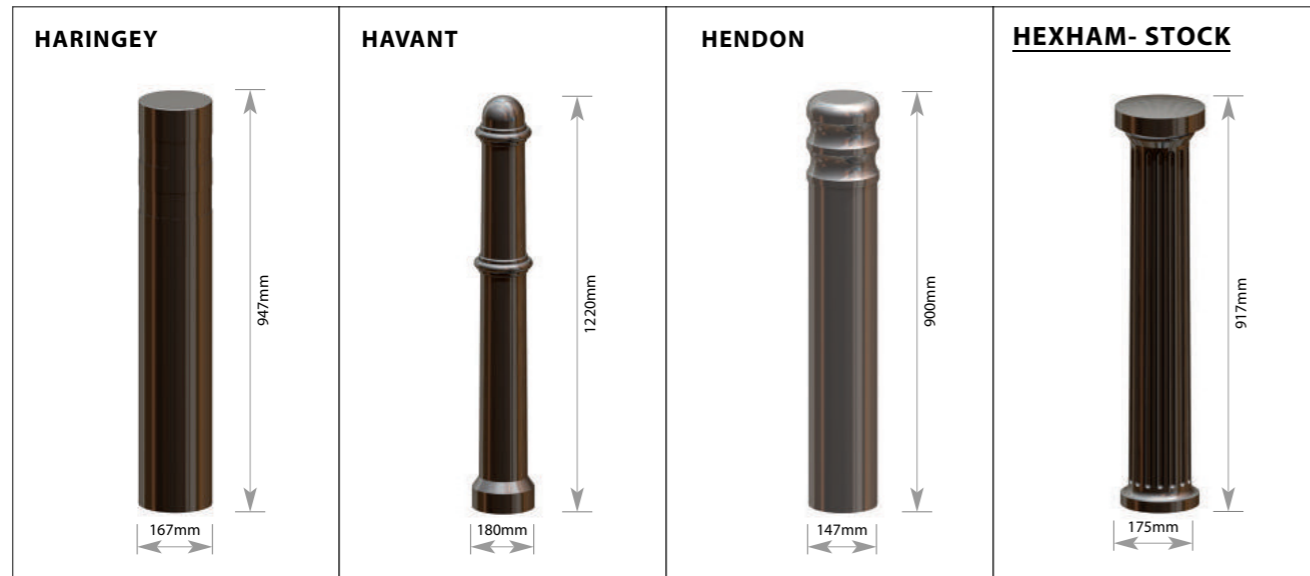

Polyurethane has largely replaced Cast Iron as the material of choice for the production of decorative bollards.

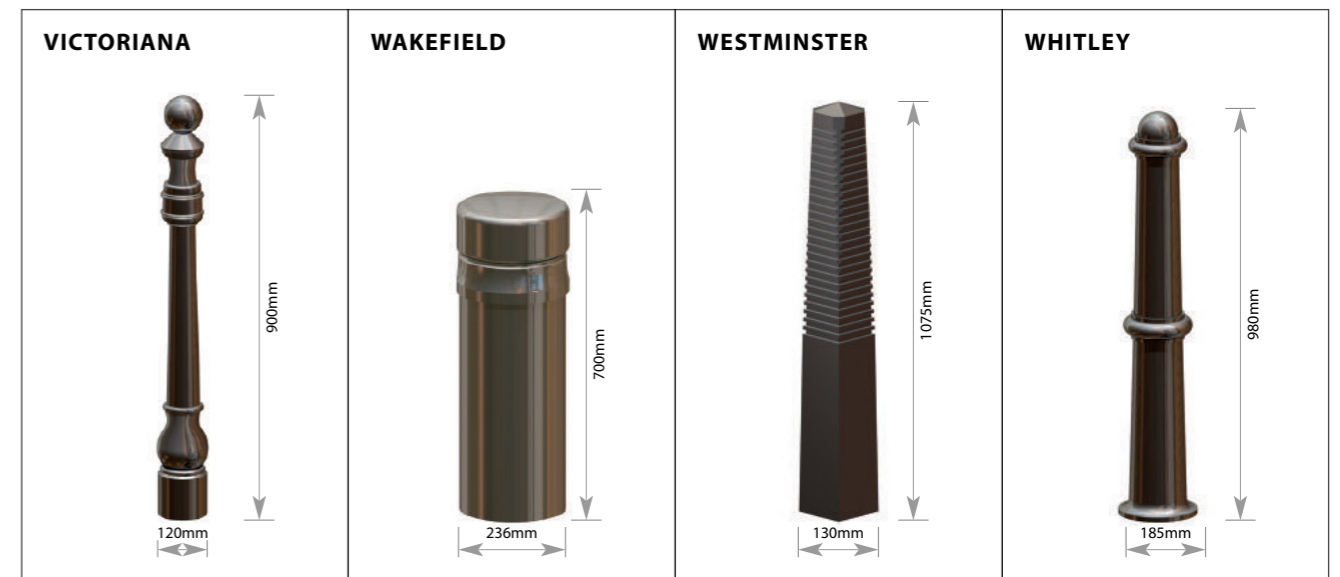

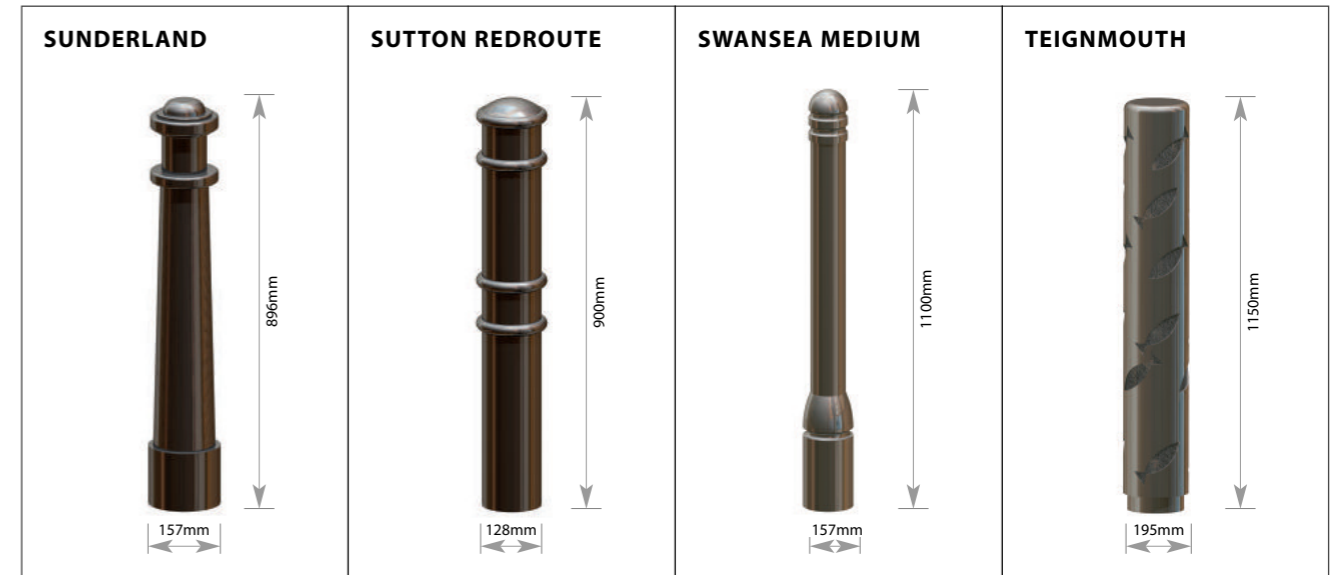

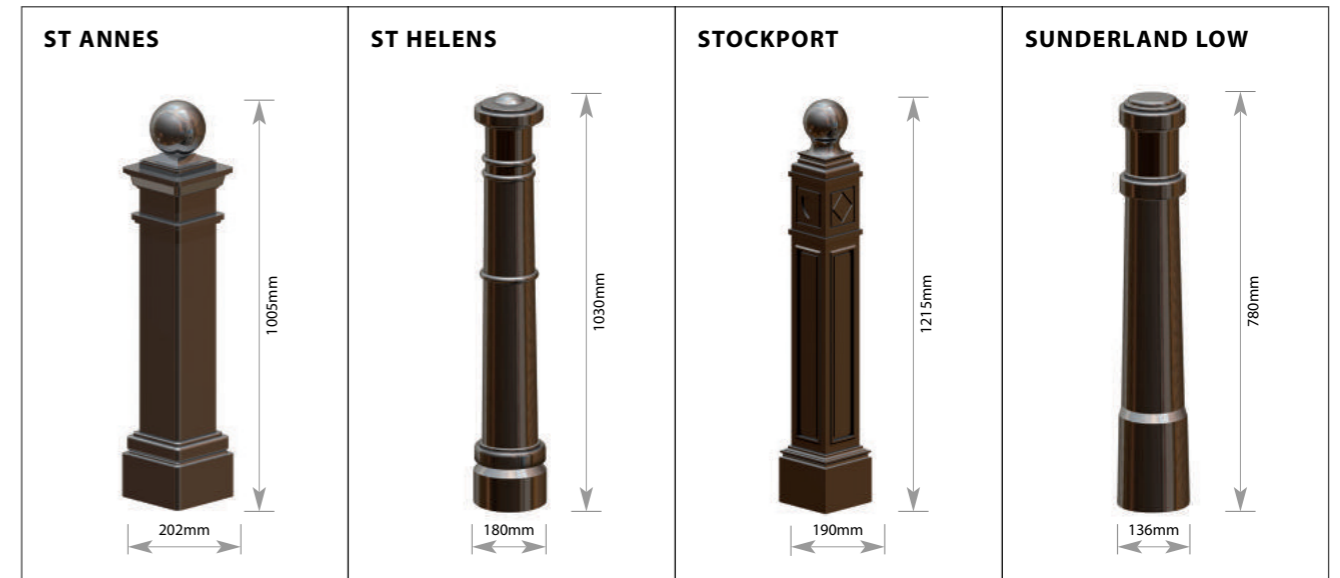

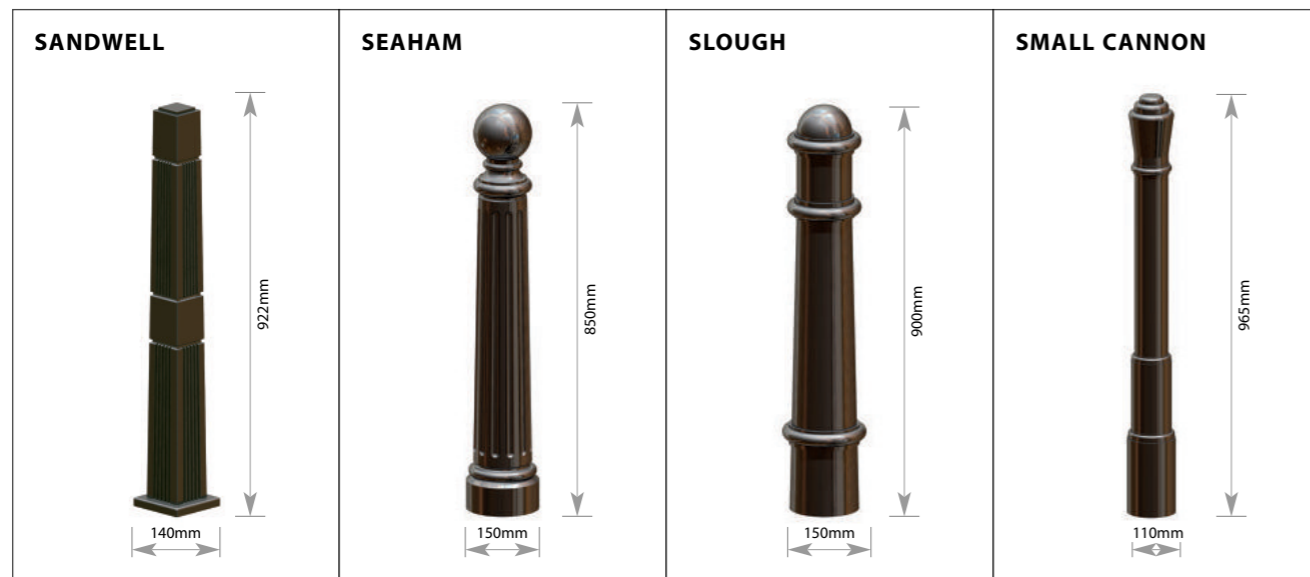

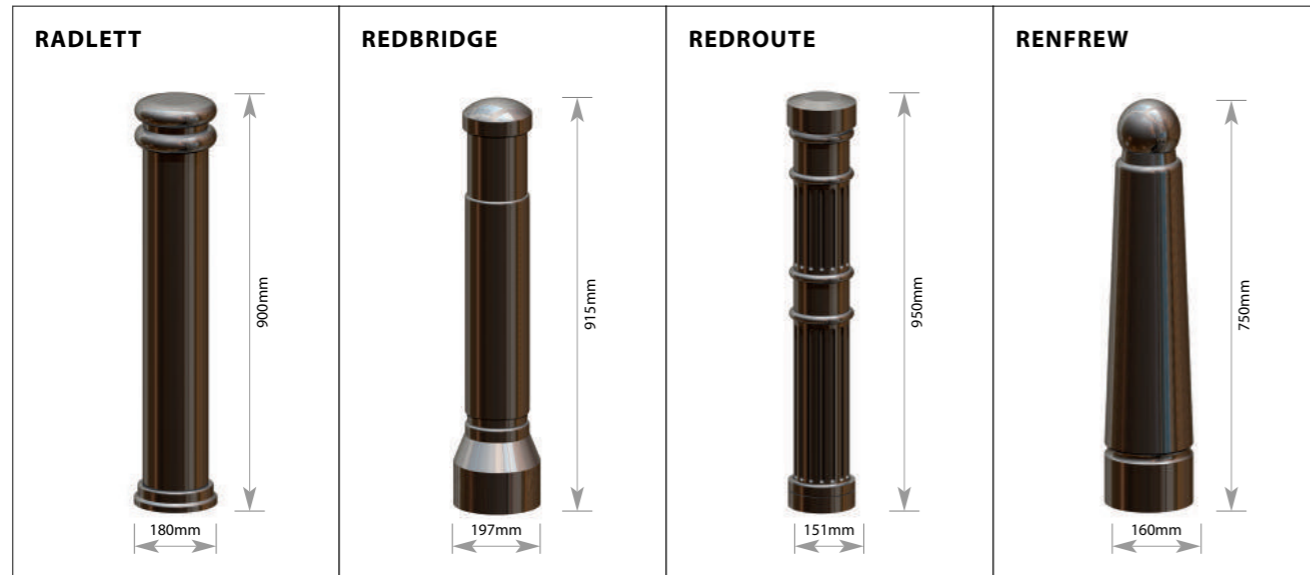

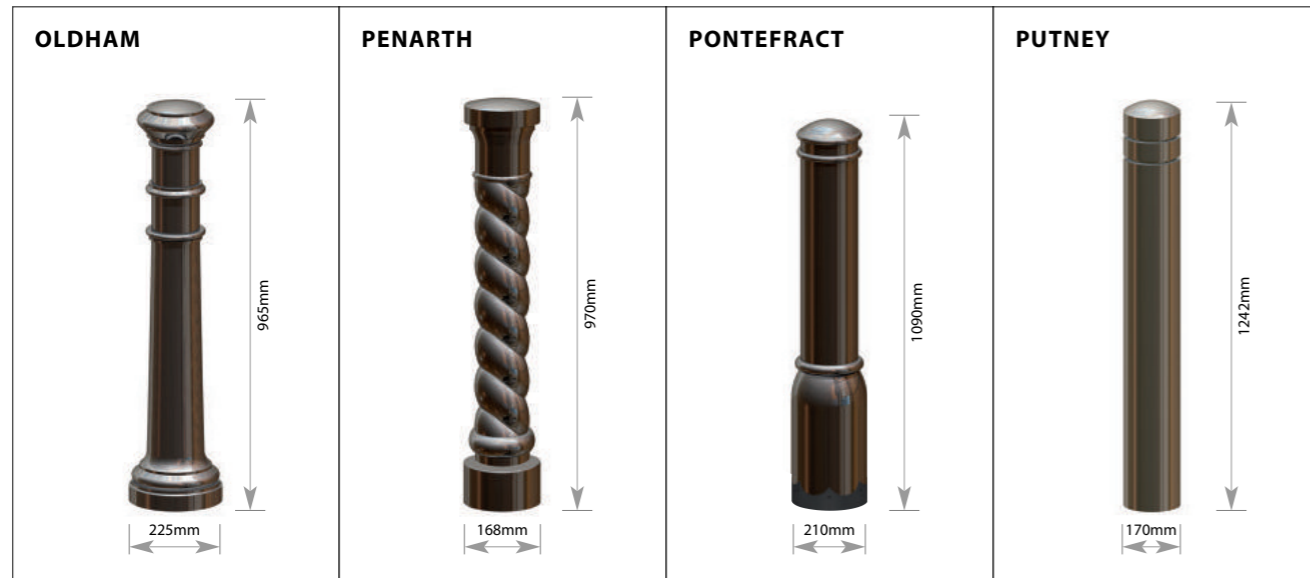

Polyurethane bollards are virtually maintenance free, do not need re-painting and are lighter and easier to handle than Cast Iron while also being more resistant to cracking in an accident.

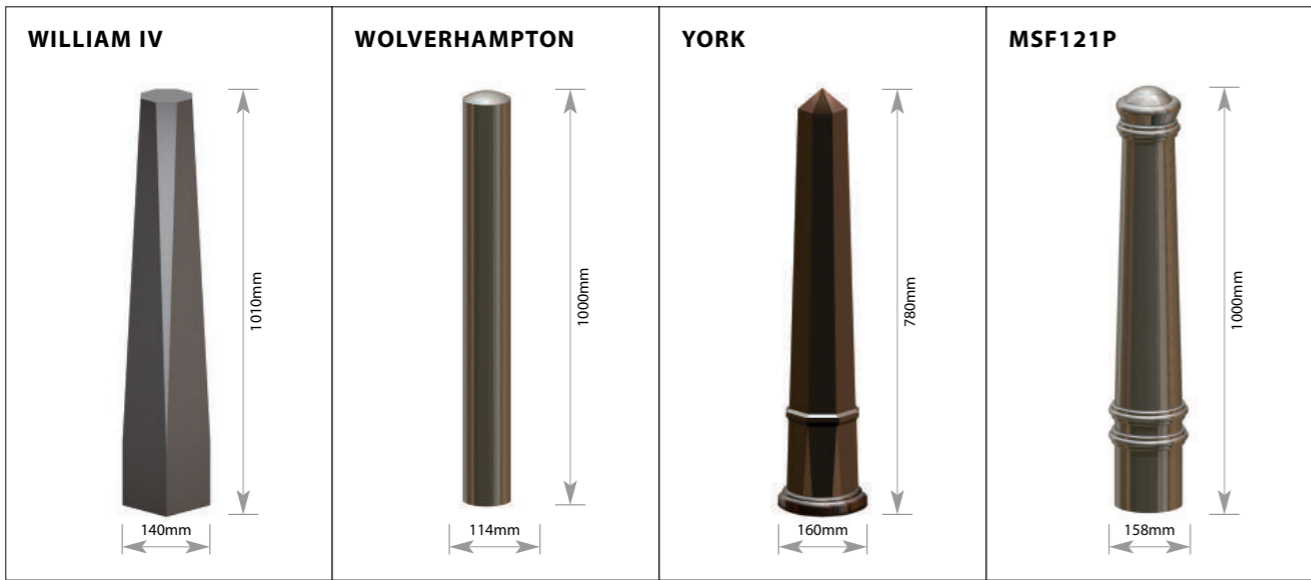

Polyurethane bollards can be supplied with reflective bands and signs added and in root fixed, removable, surface fixed and some types with a sub-surface 'Coffin Box'
