Langley Design had the pleasure of building upon our already strong portfolio with Glencar on Crosspoint Business Park in Coventry. This created a massive 780,000 sq ft of new industrial space, located close to the M6 it is a perfect corridor into the West Midlands. With the influx of employees, they needed ample cycle parking to ensure bicycles were sheltered from the elements. Langley Design manufactured, supplied and installed our MCS201's across the site. We were able to make these to bespoke sizes to fit in with the site requirements. These galvanised steel shelters will stand the test of time in an industrial environment whilst still looking aesthetically pleasing. Within the shelters to give an extra level of security when locking bikes up, we also provided cycle hoops with a cross rail, giving the owners ease of use and peace of mind whilst leaving their bikes unattended. Dotted around the site are our SBN304's with grey granite plinths and class 4 treated redwood tops, they are robust but still provide a comfortable seat for when people want to relax on their breaks or to enjoy lunch. To complete the package, we provided our popular Sheldon Bin Store, the SBS304. This can be altered to allow the required number of bins to be housed, depending on site requirements. Again, using a class 4 treated redwood and an R32 roof which is available with various colour options.
