

Langley Design were pleased to work with Mildren Construction on another project and this time it was for the new McDonalds in Bournemouth. There was a requirement for a sedum cycle shelter to provide cycle parking for those visiting the Weymouth Gateway Retail Park. The new retail park is set to be a huge boost for the town's economy and create hundreds of jobs for the area. Our popular Sheldon cycle shelter (SCS319) is constructed from structurally graded class 4 timber and is complemented with a sedum roof. The green roof helps the structure blend into the landscape and offsets some of the carbon footprint created by the site. Our bespoke capabilities enable us to manufacture these shelters to meet site specific requirements.
