

Greenfix Newt Barrier NF-100

Application and Benefits

Greenfix New Barrier is designed to act as a physical barrier to protect and contain naturally occurring populations of endangered amphibian species during and sometimes after civil engineering projects. Under the Wildlife and Countryside Act of 1981 Great Crested Newts, Natter Jack Toads, adders, grass snakes and common lizards are all protected from injury, killing and sale. Installing Greenfix Newt Barrier when required will prevent these animals from gaining access to the construction zone.

- Product is stable at ambient temperatures
- No special requirements for storage or handling
- Material is chemically non-reactive and generally regarded as biologically inert

Product Characteristics

Product Description	Newt Barrier NF-100 1% UV + 30% PCW
Dimensions	1m x 100m (100m ²)
Gauge	250MU
Material	Virgin +30% PCW (Post consumer waste)
Material Name	LDPE Film
Colour	Green Tint
Additives	1% UV
Packaging	Supplied on a core
