

# GDM TETRAGO light proClean 100

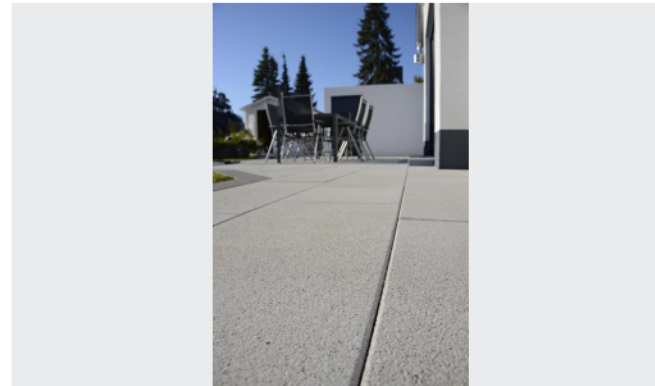

by Godelmann

URBASTYLE  
CONCRETE STREET FURNITURE

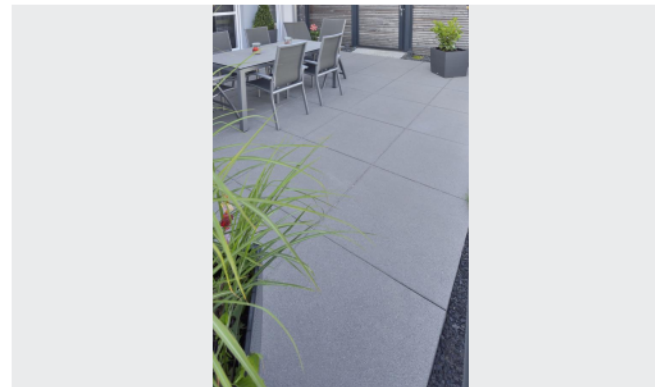

The main characteristic of GDM.TETRAGO Light slabs is their homogeneous and lightly rough surface. The subtle colours of the 5 cm thick slabs are obtained thanks to a very fine surface and a very fine shot-blasting process using small balls of stainless steel that enables the natural stone aggregates to reveal all of their true colours. With its standard modern dimensions up to 1000 x 1000 mm, the GDM.TETRAGO Light range is now a well-known reference. It comes with an anti-dirt protection, with chamfers, without locking spacers.
