

Sensory Light Tunnel: CP-SLT

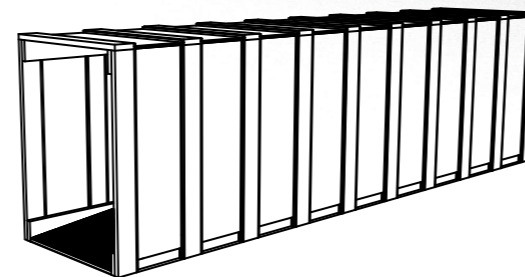

This product is made up of 9 sets of multicoloured, tinted perspex panels, mounted onto a solid timber frame forming the sides of a long tunnel. As the natural light changes, it shines through the perspex panels creating a wonderful array of colours and patterns. Children can enjoy walking through the tunnel, or even sitting or lying down in it. It has been designed to be wide enough to accommodate all sizes of wheelchair, and can be created with any colour choices as required.

The tunnel is approximately 7.0m long, 2.0m high and 1.5m wide. The main structure is supported on a base frame 75 x 175mm that holds the main upper section off the ground in order to restrict the effects of ground moisture affecting the timbers, so reducing future maintenance and repairs.

For children and adults with special educational needs, sensory play can be a vital part of their daily routine, and as such our Sensory Light Tunnel is a valuable addition to any outdoor play area wishing to deliver those sensory experiences.
