Highlighting

One or more colours can be used to highlight design detail, match existing colour schemes or incorporate corporate colours.

At Broxap we use Ardenbrites Light Gold No. 1 which is bright, durable and has excellent colour retention.

All highlighting is hand painted onto the product.

Customisation

The manufacturing process of cast iron bollards allows for detailed customisation of the bollard if required.

Depending on the complexity, logos, crests, text and ciphers can be incorporated into the design of the bollard.

Reflective material

For increased visibility, in hazardous areas or areas that require demarcation, bollards can benefit from the addition of a reflective tape.

Reflective bands are a high quality reflective tape for maximum vision when light is shone on it.

Reflective bands are available in several colours and various band widths and can be applied to any smooth faced bollard.

Duplex finish

Depending where Cast Iron Bollards are to be situated it may be beneficial for the product to receive a Duplex finish.

Coated with a proprietary duplex coating system, featuring a primer undercoat, an anticorrosive polyester second coat and an architectural decorative topcoat.

This system provides added protection from the elements in areas such as Seaside Towns, Riversides, Quaysides, Marinas, Flood Defences and Canal sides.

Please contact one of our Technical Sales Advisors for specifications and prices.
