

# Cantilever Gates

## Description

Barkers' cantilever gates are the ideal alternative where swing gates aren't feasible due to space restrictions or the area behind is on an incline.

Clever design makes them high performing, easy to install and suitable for a wide range of industries. Our manual and automatic cantilever gates are compliant with all the current safety standards. They will arrive with you ready to bolt down, if they are automatic simply plug into power and away you go.

Our products can be installed without tracks across a gate entrance, meaning that uneven ground, block paving, grass, gravel and even water are no problem. Gates glide along rollers fixed to hidden concrete foundations to protect hardware from the elements and ensure reliable, smooth and virtually silent execution. The internal roller mechanism ensures a smooth and consistent ease of operation providing a durable and efficient service for years to come on both manual and automatic models.

Barkers' cantilever gates are also surprisingly versatile. The standard round tube infill can be replaced with options such as D or W profile palisade pales, timber panels, solid sheeting and mesh to perfectly integrate with all of our fence range or existing fences.

All our cantilever gates are manufactured, galvanized and powder coated in house to the relevant British standards, guaranteeing that you receive the highest quality product and exceptional service.

To ensure cantilever gates match your fencing aesthetic and functional needs, Barkers also manufactures bespoke. Whether it's manual or automated gates you need, we can provide a custom solution which is fully compliant to BS/EN 12453.

## Automated Gates

All automated products comply with BS/EN 12453 (ALL automated gates must comply with the current legislation). We fit as standard a number of safety devices, including dual height photocells and category 2/3 safety edges.

## Options for Access Control

- Keypad
- Proximity Cards
- Photo Cells
- Voice/Video Intercom Access
- Token Acceptors
- Remote Control Fobs
- Key Switch

## Available with Additional Security Features

- Barbed Wire
- Razor Wire
- Electric Fence
- Anti-Climb Spikes

## Optional Extras

- Traffic lights
- Warning Sirens
