

## Rustic Log Seats: CP-RLS

These charming and versatile seats are made using quality Douglas Fir with FSC chain of custody.

Dimensions will vary as this is a natural product however each seat is roughly 250-400mm in diameter and 250-350mm high. The top edges are chamfered and sanded, all knots in the timber are cut close and all sharp edges are removed.

The amount of bark will vary on each seat and it will fall off over time - this is part of the charm when using natural logs.

Whilst we use the best sources of timber available to us, it is almost inevitable that cracking/splitting (known as checking) will occur weeks or months after installation. This can be especially prevalent during the hot summer months as the timber dries out.

The Rustic Log Seats are available as follows:

Free Standing (these are movable)

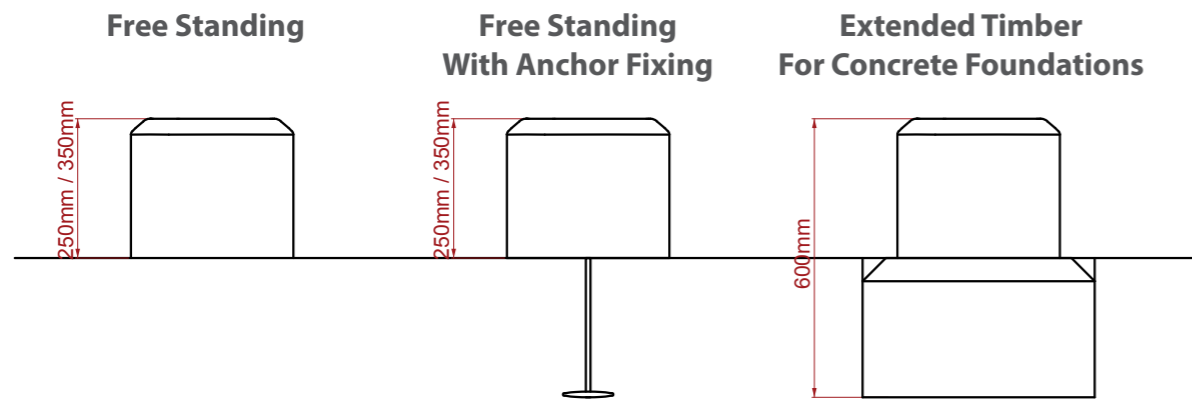

Free Standing with Anchor Fixing

Extended with Extension (debarked timber concreted into the ground)

Timber is a renewable resource, recyclable and biodegradable, and only timbers from sustainably managed sources are used.
