Amber
Flint

Plenty of other options...

PREPERATION AND APPLICATION:

DekorGrip resin bond is a two part resin dressing that can be applied to asphalt, concrete, timber or steel surfaces. Surfaces must be dry, clean, dust free and smooth (free of undulations and irregularity.)

Asphalt surfaces must be closed off using Meon DekorCryl void filler in order to prevent resin from being absorbed by the asphalt during application. Concrete surfaces require Meon Concrete Primer.

The two part resin is thoroughly mixed using a whisk and spread onto the surface with a serrated squeegee, selected dried aggregate is then broadcast. All excess aggregate is swept off once resin has cured.

SUPPORT AND MAINTENANCE:

- Samples, full method and safety data sheets, demonstrations and on-site application supervision available.
- Constant helpline to answer questions and do the calculations for you.
- Oil, dirt and stains removed by applying DekorClean detergent.
- A pressure washer can be used to restore its original beauty time after time.
