

## Traditional equipment (technical specification)

J4942-V

1- **The posts with average diameter 120 to 140mm** are made from sap free robinia. The robinia is sanded and has had its bark removed. Robinia is naturally rot proof and does not require any additional chemical protection; it is equally extremely resistant to attacks from external sources (insects, fungi, climatic variations), guaranteeing the long term durability of the playground equipment.

2- **The panels** are made from natural Robinia wood or Douglas fir (plank sizes 140 x 27mm / 45 x 68mm). Robinia wood or Douglas fir is naturally resistant and long lasting. The panels are coloured (shades of green) using a staining process.

3- **The roof** is made from robinia wood or Douglas half-logs (80 x 40 mm).

4- **The platforms** are made from a 12.5mm thick, textured, non-slip compact material (HPL). Further reinforcement is provided by galvanised steel supports, located on the underside of the platforms.

5- **The tubes** are made of 40mm diameter stainless steel, guaranteeing lasting durability and reliability of the equipment.

6- **The chains** are made of stainless steel.

7- **The buckets** are made of rotomoulded polyethylene.

8- **The fixings** are made of stainless or plated steel and protected by anti-vandalism polyamide caps.
