

Kanopé

(technical specification)

J56102

- 1- **The 120 x 120mm posts** are made of painted galvanised steel, ensuring robustness and durability.

- 2- **The 125mm diameter posts** are made of painted galvanised steel. The two-tone grey grained finish has a slightly undulating surface for increased scratch resistance. The caps are made of injection moulded polyamide.

- 3- **The coloured panels** are made from a 13mm thick compact material (HPL). Robust in construction, it has excellent weather and vandal resistance properties.

- 4- **The slatted fences** are produced using post-consumer waste, mainly recycled food and drinks containers (polyethylene, aluminium). This environmental impact reducing material is an inert and robust compound which is hard-wearing, resistant to UV light and fluctuations in temperature, and able to retain its shape over time. It is also rot-proof, making it a reliable option for outdoor applications.

- 5- **The wall panels** are made of 3mm perforated aluminium sheet coated with a polyester epoxy lacquer.

- 6- **The tubes** are made of 40mm diameter stainless steel, guaranteeing lasting durability and reliability of the equipment.

7- The panels are made of stainless steel mesh netting, Ø 6mm.

8- The 16mm diameter ropes are made of galvanised steel cable covered with polyester. The cables are linked together and held in place by injected polyamide spheres.

9- The net fittings are made of polyamide. The fittings are composed of two distinct parts for ease of maintenance of individual strands.

10-The net fittings are made of polyamide and are used to link three cords together.

11-The footrests are made from rubber, 14mm thick.

12-The slides are made of rotomoulded polyethylene.

13-The blades are made of wood-plastic composites (WPCs), 95% of which is recycled plastic material (HDPE) and post-industrial wood sawdust. They are covered with a thin decorative brown wooden layer, which makes the material resistant and waterproof, and ensures the colours do not alter over time. The planks do not require specific maintenance.

14-The platforms are made from a 12.5mm thick textured and non-slip compact material (HPL).

15-Injection moulded polyamide fixings connect the posts with the platforms and the various play features. They are non-toxic, flameproof and U.V. resistant. The thickness of the polyamide makes the equipment both strong and vandal resistant.

16-The sliding surface is made of 2mm thick stainless steel, which is shaped, bent and rolled from one piece.

17-The caps are made of rotary moulded polyethylene.

18-The porthole is made from 8mm thick methacrylate (PMMA).

19-The climbing holds are made of polypropylene. They are non-toxic, inflammable and shock and UV resistant.

20-The fixings are made of stainless or plated steel and protected by anti-vandalism polyamide caps.
