Hatko Group of Companies

Founded in 1985, **Hatko** operates in diverse sectors, including noise barriers, synthetic turf, and dairy equipment, with a strong commitment to sustainability at its core. As the first and only Turkish member of **The ENBF - European Noise Barrier Federation** and **The IRF - International Road Federation**, Hatko is recognized for its innovative and environmentally conscious solutions. With a dedicated team of over 110 employees, **Hatko Group of Companies** drives its mission for sustainable development through its offices and state-of-the-art manufacturing facilities in Istanbul, Iskenderun, and Osmaniye.

Honored with multiple domestic and international awards for achievement and quality, **HATKO** is founded on 3 basic principles:

**SUSTAINABLE,
SMART
and SAFE.**

PORTUGAL FACTORY

2 Pollutions 1 Solution Strategy (2P1S) ;

Hatko Recycled Rubber Noise Barriers are the Perfect Solution for the two main problems; Discarded Tyres and Noise Pollution.

Waste is a Resource When It is Properly Managed

Recycled rubber derived from recycling of car and truck tyres are used in Hatko Noise Barriers in order to provide

- + Sustainability: preserving natural resources, opportunity to reduce carbon footprint,
- + Noise mitigation to a desired level,
- + Resistancy to the toughest weather conditions,
- + Opportunity to be recycled after end-of-life,
- + Creating value in a circular economy,
- + Stylish appearance by the help of the synthetic turf,
- + Fully customizable design,
- + Low Carbon Footprint, as declared in **EPD**,
- + To be able to create hybrid systems such as solar panel applications for net zero target.

Hatko Recycled Rubber Barriers make an infinite contribution to the circular economy.

Hatko Recycled Rubber Noise Barriers can be recycled after end-of-life. In this way, it creates endless value in the circular economy

The World's Lowest-Carbon Noise Barrier

CO₂

Hatko is committed to net zero greenhouse gas emissions, nature positive, healthier planet with ambitious goals set for 2030. **Hatko** recognises that a balance between anthropogenic emission sources and removals is needed to limit global warming.

The CO₂ emission of 1 sqm of Hatko Recycled Rubber Noise Barrier is only

2.7 kg CO₂ equivalent

World's 1st Carbon Neutral Rubber Noise Barrier

Global Centre of Rail Excellence (GCRE), The UK

Project : Global Centre of Rail Excellence (GCRE)
Color : Black + Green
Height : 2 m
Country : United Kingdom

We are proud to partner with **GRAMM** and **Global Centre of Rail Excellence (GCRE)** to deliver the world's first carbon-neutral noise barrier – using **Hatko's** innovative noise barrier technology. This sustainable solution combines effective noise reduction with environmental responsibility, making it a smart choice for urban infrastructure projects. The **Hatko** noise barrier not only protects communities from noise pollution but also reflects our dedication to sustainability and safety. It's fantastic to work with like-minded partners who share our vision of creating safer, smarter, and more sustainable cities.

Thank you to the dedicated teams at **GRAMM** and **Global Centre of Rail Excellence (GCRE)** for their hard work in making this project a success!

1915 Çanakkale Bridge

Hatko Sound Barriers provide superior performance

- + Offers the best solution for noise mitigation applications, providing road safety and noise reduction,
- + High noise mitigation performance and high design life,
- + Least carbon footprint in the industry, perfect way of decarbonization,
- + Endless contribution to circular economy,
- + Climate and maintenance free,
- + Fire resistant,
- + Easy setup and installation,
- + Stylish look prioritizing aesthetics and acoustics,
- + 10 years of warranty.

Kalyon PV R&D Centre

The first PV-integrated highway noise barrier of Türkiye is boosting the energy of the highways!

Hatko have installed its first solar-powered noise barrier as part of successful research and development efforts. **Hatko's** goal is to create solutions that bring its benefits to life and to make highways and railways quieter and safer while making the most of solar energy, which is good for the environment.

This technology not only gives drivers and passengers a comfortable journey but also helps to produce electricity for highway illumination and nearby communities, making life more comfortable for everyone while endlessly contributing into the circular economy.

Hatko provides exceptional end to end services by the help of its expert staff specialized in acoustics, construction, customer service, R&D and supervision. **Hatko** measures, assesses and controls the noise.

- + Acoustic mapping in order to measure the noise levels,
- + Determining the optimum demand for the noise barrier project,
- + Preparation of application project and construction drawings,
- + Supervision services,
- + Tailored designs of hybrid systems,
- + Complete service of infrastructure and installation,
- + Reporting of the performance of the noise barrier project after installation.

By successfully minimizing the noise around high traffic areas such as urban highways, train and tram routes; HATKO Recycled Rubber Noise Barriers enhance the health and well-being of all residents preventing a variety of health effects by providing quieter, less stressful environments.

Stylish Grass Design

Artificial grass decoration is perfectly paired with Hatko Recycled Rubber Barriers. For the clients thinking outside the green, there are many colours available while being designed for being exposed to all adverse weather conditions.

Artificial grass inlay logos are fully customizable, down to the smallest details.

Alternative Rubber Colour Options

Bespoke Pattern Weaving

PRODUCTS

Model NB1

Material	Recycled Rubber
Dimensions	100 cm x 200 cm x (+/- 1%)
Thickness	80 mm (+/- 1%)
Features	
Surface Design	Front: 10 cm x 10 cm grids of artificial grass Back: Artificial grass with wavy design Double-faced usage
Internal Reinforcement	Rigid structure
Design Alternatives	Customizable inlay logo application Decorative artificial grass options Alternative colours
Warranty	10 Years

Model NB2

Material	Recycled Rubber
Dimensions	50 cm x 200 cm x (+/- 1%)
Thickness	80 mm (+/- 1%)

Model NB3

Material	Recycled Rubber
Dimensions	50 cm x 300 cm x (+/- 1%)
Thickness	80 mm (+/- 1%)

Features

Surface Design	Front: Artificial grass weaved LDPE foam in chamber Back: Artificial grass
Internal Reinforcement	Rigid structure
Design Alternatives	Customizable inlay logo application Decorative artificial grass options Alternative colours
Warranty	10 Years

Advantages and Benefits

- + Being produced of recycled rubber derived from end-of-life tyres; it is the most sustainable solution for noise barrier projects,
- + Endless contribution into the circular economy,
- + High performance of noise insulation and absorption,
- + Significantly reducing the noise of the traffic without compromising the view, aligning with the nearby scape thanks to its aesthetic design,
- + With its dual face design, can be adapted to any environment,
- + Reinforced with a rigid backbone for extra stability,
- + Ease of installation and reinstallation,
- + Requiring no maintenance,
- + Designed to resist to fires obtaining safety for nearby environment and passive fire protection,
- + Resistance when exposed to all adverse weather conditions,
- + Resistance to abrasion gaining high durability,
- + Compliance with the requisite international standards.

Assessment and Analysis

Hatko Recycled Rubber Noise Barriers provide accurate results with simulations prepared before the actual application.
