CITYSCAPE RANGE

Cityscape Planters

Introducing the enhanced Cityscape Range of contemporary planters ideal for use in biophilic style planting schemes.

This premier range has many advantages -

- Five unique designs in over 40 sizes, all with the same design cues for mixing and matching. From 20cm table tops to 2m diameter tree planters.
 - Over 30 biophilic style finishes meaning you can mix style, finish and colour while maintaining a cohesive design.
 - Finishes include concrete, earthenware, terracotta, 11 different stone types, 6 different vintage metals, corten steel, Verdigris, aged and antique lead. See the finishes section at the back of this brochure for full details.
 - Strong but lightweight fibreglass composite construction, great for use indoors or outside, from streetscapes to roof gardens and everything in between.
- Handmade to order in the UK, never out of stock, always replaceable and easily added to on site in the future.
 - Strong environmental credentials. Very low carbon footprint due to the place and method of construction. The leading all of life green construction material, fully refurbishable to as new condition. The only material approved for planter construction by COP26 Glasgow.

Thanks to the following locations for allowing us to take these amazing photos for this brochure. Edinburgh Mining Museum, Stewart Brewing and Moredun Research Institute.

Biophilic Style Finishes

At Livinggreen Design we have spent **decades** researching and developing specialist coatings for fibreglass products to make them appear and even feel like **genuine natural** materials. These finishes are not available from other sources and distinguish our products as premium in the marketplace. Now you can have all – **lightweight**, very **strong** planters and furniture, with the **look** and **feel** of real stone, **Concrete, Earthenware, Corten steel, Verdigris, Aged / Antique lead, Vintage Brass, Bronze, Copper, Brushed and Vintage Aluminium**. Mix and match these finishes and planter designs for a truly **unique biophilic** look without compromise in both interior and exterior situations.

NB: the colours shown throughout this publication are only as accurate as the four colour printing process can achieve, they should be used only as a guide.

DIVPVA03 - Artisan Black

DIVPVA01 - Light Grey Stone
DIVPVA01 - Vintage Bronze

DIVPBO04 - Verdigris

DIVPVA01 - Vintage Bronze
DIVPVA02 - Vintage Brass

Corten Steel

Our Signature Finish. The result of many years of development that has produced a **Rust** effect that where we are able to control the amount of rusting, the depth of colour and the patina. We can also fix that moment in time, **stopping further rusting** and **preventing rusty runoff** onto finished surfaces.

We guarantee that no one will be able to tell that your fibreglass planter or seat is not made from real Corten steel. For roof gardens and terraces in particular this is a game changing finish. But we recommend it for anywhere Corten steel was to be used - Fibreglass is more **cost effective**, much **lighter**, just as **strong** and every bit as **long lasting**.

While other faux rust finishes are available, we are the **ONLY** landscape product manufacturer using this trade marked finish. For the ultimate in 'unreal steel' its got to be Livinggreen.

Verdigris / Verdirust

Like Corten Steel, our Verdigris finish **uses real metal** to create a thin copper plating on the surface of the fibreglass. This **oxidises** naturally in the elements creating a beautiful **blue / green patina** overtime. As the finish is the product of **genuinely oxidised copper**, it behaves in exactly the same way meaning the effect is fragile can be rubbed off accidentally. So we recommend this finish for an area of low footfall where the product is unlikely to be brushed against.

Again like Corten Steel, Verdigris can be fixed by application of a specially developed lacquer which makes the surface much more robust without dramatically changing the effect.

Verdirust is a unique blending of our rust and Verdigris finishes to give a truly beautiful **combination** of **colour** and **patina**. Like all these 'real' metal finishes, each product will be 100% **unique** as the process produces a different look every time.

Verdigris

Verdirust

Vintage Metals

A further development of our corten steel technology, we are now able to **bond** a real layer of **Brass, Bronze, Copper, Iron** and **Aluminium** to the fibreglass surface, similar to **chroming**, enabling us to produce fabulous 'real' metal products with **none of their drawbacks**.

Our vintage metals can be applied to any of our planters or furniture and are suitable for use in both **indoors** and **outdoors**. The metal surface is cut and polished to produce a **genuine mottled vintage** effect which can then be preserved with our special waxes for inside use or using our matt or gloss sealants which make them resistant to **weathering** and **oxidation** outdoors. If preferred we can leave them **unsealed** and the metals will oxidise naturally **overtime** to produce the Verdigris or rust patinas.

Vintage Aluminium

Brushed Aluminium

NB: the colours shown throughout this publication are only as accurate as the four colour printing process can achieve, they should be used only as a guide.

Iron

Copper

Bronze

Brass

Naturals/ Rustic Naturals

Emulating real concrete, earthenware and terracotta our Natural finishes have proved popular and **hardwearing** over many years. Recently we have taken this look a stage further with the introduction of our Rustic option to all these finishes. Rustic naturals have exactly the same **colour** and **appearance** of the originals but in addition the surface of the product is **pitted** and **broken** to give an **even more** realistic look. These finishes are available on any of our products and are suitable for both interior and exterior use.

Original

Rustic

Aged Lead / Antique Lead

Our venerable Aged lead finish (the original 'natural finish') is still one of the most **popular** among garden designers and commercial landscapers alike. Often also used as a darker grey concrete effect, aged lead has a dark base with a **mottled whitish bloom** over the top, just like **real oxidised lead**. It's an **integrated finish**, meaning the colour is fixed into the product when made, but like terracotta, the white bloom can be accidentally removed so some care in handling and maintenance is required.

All aged lead products have a different, natural, appearance and will change with the weather as the outer product surface is porous and will take up moisture from the rain and in the air.

Aged Lead

Antique Lead

Tuscan Terracotta

While real terracotta is a beautiful addition to any garden, there are major drawbacks, particularly when going large. With our terracotta finish the **problems of weight, cost and frost resistance** are all **solved** at a stroke **without any compromise** on the look required.

Just as with Corten steel, once planted you absolutely cannot tell that you are looking at anything other than a genuine terracotta pot.

Over the years many of our customers have use the finish to allow **tree planting** in terracotta on roof gardens and terraces, something completely impossible with the genuine article.

Light Terracotta

Terracotta

Concrete/ Earthenware

Earthenware recreates the look of **baked raw** baked clay, while Concrete, is a light grey recreation where a **roughcast** look is required.

Both are very hardwearing with the finish integral to the surface of the fibreglass. A **mottled aging effect** is created with the additional of an **electrostatically charged whitish dust** that give the finish its whitish bloom. This will remain part of the finish forever unless accidentally removed by rubbing it off with a cloth- we give full instructions on care to prevent this happening.

Like Terracotta, these finishes have all the look of the genuine materials but none of the weight issues.

Concrete

Earthenware

Premium / Rustic Stone

Like Corten Steel, our recently released Premium Stone is a tour du force in coatings technology. For the first time, we are able to directly **bond** real aggregate directly to the fibreglass surface producing what is in effect a stone cladding. By varying the **pigmentation** and **aggregate** mixture we can mimic pretty well any commercial stone and even the variations from individual quarries.

In response to popular demand we have added a rustic option to our stone range, where the normally unbroken surface is now **perforated** by **pits** and **holes** to give an even more 'natural' effect. All colours are available in this finish.

So while we offer a standard range of **11** colour options, we have over **70** available and can often match exactly to real stone on the same site.

The nature of this coating means it is incredibly hard wearing and a great choice for streetscapes as well as choice private gardens.

Artisan

A game changing finish giving you the ability to specify any of our products in a **rough, pottery style** look and in any colour. While our products are all 100% handmade, the Artisan finish give them an **authentic crafted appearance** very in keeping with the **biophilic style**. It's very **hardwearing** and **UV safe**, suitable for both interior and exterior use and wonderful for mixing with our other biophilic style finishes.

Colours & Finishes

Paint

With a full professional bodyshop located at the heart of our workshop, we are able to offer almost any colour and finish of paint either on the market today, or even going back 50 plus years from just about any UK manufacturer.

We can match to almost anything given a physical sample and offer full **gloss**, **satin** and **matt** coatings as standard options. **RAL**, **BS** and **Pantone** colours are all available ready matched along with all your favourite specialist paint colours. We mix everything ourselves using our own computer controlled machinery to ensure you get the exact colour required. The paint itself is quite simply the highest quality, longest lasting and most weather resistant on the market, and like our products, it is 100% made in the UK.

When coated, flat fibreglass has the exact appearance of powder coated steel but again, **none of the weight, cost**, and in steels case, rusting issues that come with this material, which in our long experience is one of the worst materials available if you want a long lasting, good looking, maintenance free, product.

Textured

Our classic textured finish is a **smoothly rippled matt effect** creating using a thick coating of self colour gel, to the same exacting specification as **Lloyds approved marine grade** materials used in boat building. This is our longest lasting, commercial grade finish, **highly resistant** to casual damage and stuffed full of UV filters. It's **corrosion resistance** is legendary, designed to survive long years in close contact with sea water, so even a bit of acidic city rain holds no fears.

This finish will remain unchanging in the harshest of environments for many years. While the colour range is less varied than wet paint, we can still match all the usual RAL & BS colours plus a good deal of the more common commercial paint colours. Send us an original and we will usually be able to achieve a very close match.

We also offer a textured paint finish in any of the wet paint colours listed above. While not the same robustness or patina as Classic textured, it is a useful option, particularly in high footfall areas where casual scratching and wear can soon deface a smooth painted product
