

## CASE STUDY

### Warblington School

In early May 2016 Phil Leckey, the Site Manager at Warblington School in Havant, contacted Zenith to quote for canopies for an outdoor eating area at the school. Craig Gilbert carried out a site survey and provided Phil with various design options. After consultation with the school management group they selected the choice of 3 x 5m x 5m Airone Cicogna 150 structures with curved shape canopies as their preferred option.

Zenith fitted the canopies in August 2016 and they now provide all year round cover for an outdoor eating area for up to 72 students. In addition to the outdoor eating area they also double up as an outdoor classroom during the summer.

The Cicogna 150 structures are available in standard modular sizes from 3m x 3m up to 7m x 7m. The Cicogna style is also produced with a larger profile and the Cicogna 175 are available in sizes from 7m x 7m up to 9m x 9m. The steel framework is available in galvanised only finish or galvanised and powdercoated in a choice of colours. Both the 150 and 175 can also be produced in bespoke sizes.
