

Max Dimensions:

Height: 900 mm | Length: 500 mm | Width: 250 mm

Capacity: 50 Lt | Weight of steel: 40 kg

**Description:**

The load-bearing structure of the EIGHT BIN WOOD is made in steel of 50/10 thickness. The door is made of 2 elements in steel sheet of 20/10 and 30/10 thickness, on which a panel in multi-layered exotic wood of 20 mm thickness is fixed through specific bolts. On the side of the load-bearing structure a triangular key lock is placed. The inner bag-holder is made in galvanized steel of 20/10 thickness. It is placed on specific supports welded to the load-bearing structure, 20/10 thickness as well. To help with the extraction of the bag, the bag-holder is removable. On the bottom of the bin there are 4 holes of 10 mm diam. for the fixing to the ground through specific bolts (not provided).

For the realization of this product, Steel EN10111DD11 is used and later treated with a cycle of sandblasting, cataphoresis and powder coating. Such cycle is meant to guarantee the protection of the painted products, in an environment of C4 corrosion class, as requested by the UNI regulations EN ISO 12944-2.

The products are eventually polyester-powder coated with RAL colours at choice.
