

Max Dimensions:

Height: 480 mm | Width: 500 mm | Length: 1800 mm

Weight: 88,5 kg

**DESCRIPTION**

The bench PAPER is made in steel of 60/10 thickness. The bench has 2 sheets joined through a continuous welding, which creates the typical wave shape. The 90° bending of the sheet creates the feet of the bench with holes (11 mm diam.) for the fixing to the ground through specific bolts (not provided).

For the realization of this product, Steel EN10111DD11 is used and later treated with a cycle of sandblasting, cataphoresis and powder coating. Such cycle is meant to guarantee the protection of the painted products, in an environment of C4 corrosion class, as requested by the UNI regulations EN ISO 12944-2. The products are eventually polyester-powder coated with RAL colours at choice. As an alternative to steel EN10111DD11, the production in corten is also available, on demand. In this case the material is treated with a specific oxidation process.
