

The RNLI training college at Poole required a contemporary fence to compliment their prestigious new building, which could also be uniquely customised to display a nautical influence that would reflect the work of the lifeboats.

Lang+Fulton worked in conjunction with the architect to develop two bespoke designs of *Roma* fencing with different styles of wave top.

Roma-3 was customised with a decorative rail and 114mm CHS post. A 2100mm section of fencing represented a continuous wave and the adjacent wall-mounted 1700mm fencing, represented a series of broken waves.

The project also included a standard 1700mm high fence with 50mm Ø posts.

The contract comprised a total of 135m fencing and 6 gates, hot-dip galvanized and polyester powder coated for the sea-front location, with stainless steel fixings.

Poole Council have recommended that the RNLI's fence should set the standard for visually stimulating, quality fencing.
