

# Playground and Safety Surfacing

**Active Leisure** offers a number of playground and safety surfaces to suit performance, site and budgetary requirements.

Rubaflex with graphics

## Rubaflex

is a porous laid wetpour rubber safety surface available in a range of colours, depths and Critical Fall Heights tested in accordance with BS EN 1177. Ideal for parks, schools and nurseries where budgets allow.

A full range of permanent colours allows the creation of patterns, inlaid shapes of logos if required. Rubaflex can be laid onto existing hard surfaces or new compacted granular bases.

## Grassflex

a versatile and economic artificial grass safety surface incorporating an impact absorbing porous underlay. Two standard Critical Fall Heights are available, 1.5m (55mm nominal thickness) and 3.00m (90mm nominal thickness) (tested in accordance with BS EN1177). Normally green, but also available in other colours. Grassflex is ideal for schools, nurseries and gardens. It normally requires only minimal base works, making it ideal for greenfield sites. Suitable for DIY installation if required.
